Anthropology is the study of human beings and their societies. Anthropologists have a unique perspective on climate change because they can examine it from a cultural, social, and political perspective. This allows them to understand how climate change is affecting different communities around the world, and how these communities are responding to it.

This book explores the role of anthropology in understanding and addressing climate change, from local actions to global transformations. It

brings together leading anthropologists from around the world to share their research on climate change and its impacts on human societies.

The book is divided into three parts. The first part, "Understanding Climate Change," provides an overview of the science of climate change and its impacts on human societies. The second part, "Responding to Climate Change," examines how different communities around the world are responding to climate change, from local adaptation strategies to global climate policy. The third part, "Transforming Climate Futures," explores the role of anthropology in helping to create a more sustainable and just future.

This book is an essential resource for anyone who wants to understand the role of anthropology in understanding and addressing climate change. It is a valuable contribution to the growing body of literature on climate change and its impacts on human societies.
