

Everything Nurses Need to Know to Safely Administer High Alert Medications

A Comprehensive Guide

High alert medications (HAMs) are medications that have a high risk of causing serious harm if they are not administered correctly. These medications include opioids, anticoagulants, and chemotherapy drugs. Nurses who work with HAMs need to be aware of the risks associated with these medications and how to administer them safely.

Drugs & critical lab values for emergency cases: Everything a Nurse Needs to Know to Safely Administer High-Alert Medications. Learn How to Effectively Monitor for Side Effects and Patient Symptoms!
